

## STEEL BOLTED SILO

Applying same method for panels by using bolt connection, Steel Bolted Silo does not require welders and save up lots of time and cost for installing at site.

**Ecobuild** high quality silo are:

- ✓ Assembled according to a unique, patented design
- ✓ Supplied as a package consisting of prefabricated components that fit together perfectly
- ✓ Transported in standard 40 ft sea containers
- ✓ Offered in a range of standard dimensions, or in custom sizes if required.
- ✓ Suitable for storing all types of dry bulks material such as: food & grain products, plastics, coal, cement, minerals,...

All raw materials are tested for quality before moving to the production stage.

The steel plates will be cut and punched with an automatic laser cutting machine before surface treatment by shot blasting technology up to the highest level SA 2.5 / SP-10.

The tank is then painted with the best paint systems of AkzoNobel, Jotun or Ecobond - a fusion bonded epoxy powder coating developed by **Ecobuild**, this helps satisfy all customer requests about painting.

After the production process, components of the tank including roof, accessories ... are packed and inspected before shipping out to the installation site.
